# Introducing the parabolic token

Parabolic Token has been carefully designed to achieve a single purpose which is **GOING PARABOLIC** (making an upward price move). With these comes the introduction of the super addictive game and tokenomics that will be of great help to the coin in taking it to attainable heights. All profits made from our super fun and addictive game would be burnt in order to raise the value of the token. And that our trusted holders may get the best financial advantage of the limited supply that is left.

Parabolic token is made by the trusted and doxed Dev Mark Hamilton, the owner of MIND MUSIC. Mind Music is a long-term secure project developed to raise money for mental health awareness, thus breaking the stigma, whilst rewarding token holders.

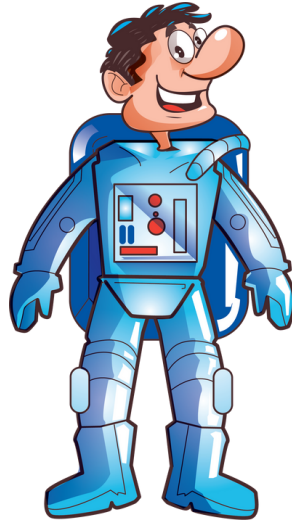

# Our Mission

Following the token creation, we intend to create a platform where our holders would find a game with the best financial advantage. Our goal is to take parabolic token to the skies of financial worth through continuous limitation and cutting of the token supply.

In addition to that, we intend to share the game profits with the holders of Parabolic Token.

# How does the token work?

To make this work out, we charge a little expense (12%) on every exchange that happens. We additionally disperse those assessments in the following manner.

**3% - Unique Buy Back:**

Unlike most coins that simply buy back tokens and send them to a dead wallet, we buy back the tokens and automatically join them with multiple liquidity pairs. This will increase the floor price of the coin and generate a higher transaction volume to keep the liquidity pools level. We will join this liquidity in 8 different pairs BNB, BTC, ETH, BUSD, USDC, USDT, DOGE, CAKE

### 3% - Deflationary Burn

Most coins simply burn tokens by sending them to a dead address, we burn our tokens by completely removing them from the supply. This constantly decreases the liquidity to market cap ratio and therefore increases the individual price of each token. We fully expect this tokenomics to remove at least 20% of the supply from existence within 24 hours of launch.

### 3% - Auto-Liquidity

Having a large amount of liquidity increases the stability of coin and reduces the impact of any sells on the chart. Reducing the impact of sells is vital to keeping the chart moving upwards.

### 3% Game development

This percentage amidst all transactions will be used to fund the development of our game. As soon as the game is paid for and released, we will update this tokenomics to a 2% reflection that rewards the holders of the coin and a 1% donation to Mental Health Awareness.

# Why invest in Parabolic?

## 1. No High Taxes

With Parabolic Token, the token holders will not face the huge burden of high taxes. Instead, every penny will get pumped into the project, so that the token holders may get the best value of the token due to the best market cap available in the liquidity pool.

## 2. Continuous Burning Of Parabolic Token

Given our goal of rendering the best financial services for our trusted partners. The profit at the rate of 50% will be burnt and removed from the token's total supply. This removal will automatically raise the worth of the existing tokens, and then our trusted partners will reap the best financial advantages.

## 3. 24/7 AMA (ASK ME ANYTHING) PROTOCOL

For proper clarification on our project, we will launch the Ask Me Anything Protocol through our public group on telegram. The participants of this group will be free to ask any question at any time. The queries of the participants will be responded to professionally

# The Game and How it Works

The Parabolic game will be super fun and super addictive! 50% of the profits made from the game would be burnt to increase the token value and reward the long-term holders of the coin.

## The Unusual game

At the beginning of each round, players will place their bets by depositing the amount of parabolic token they wish to gamble. As the round progresses the trading chart will become more and more parabolic increasing the bet multiplier. The aim of the game is to cash out before the chart rug pulls (crashes). Gameplay is based on crypto trading charts and is designed to look that way also. To place your bet, you 'Buy' tokens and to cash out you 'Sell' Tokens

## What makes the game unique

There are not many things that differentiate us from other crash games available now. One of them is a special element of our game play that empowers you to cash out a level of your bet during live play. This will imply that while the chart is running you can cash out 25%, 50%, 75% or 100% of your bet whenever. One more special feature of our game play is that that chart won't just ascent and afterward crash, but also fall and rise again at random before the rug pull (crash) happens. Finally, and maybe the most thrilling part of everything is the way we will share the game benefits to the holders of Parabolic Token.

## What the profit sharing entails

50% of the benefit gotten while playing the parabolic game will be burnt to expand the worth of the coin for its holders. Then, at that point, the remaining 50% of the benefits will be held for game liquidity. Thus, having a high measure of game liquidity will guarantee winners are consistently ready to be paid out on schedule.

# How it Works

At the beginning of each round, players will place their bets by depositing the amount of parabolic token they wish to gamble. As the round progresses the trading chart will become more and more parabolic, increasing the bet multiplier. The aim of the game is to cash out before the chart rug pulls (crashes). Gameplay is based on crypto trading charts and is designed to look that way also. To place your bet, you 'Buy' tokens and to cash out you 'Sell' Tokens.

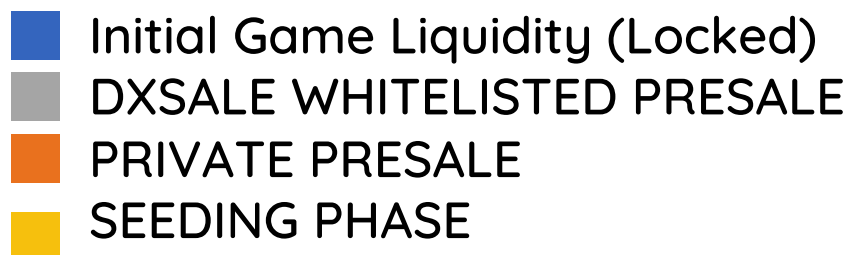

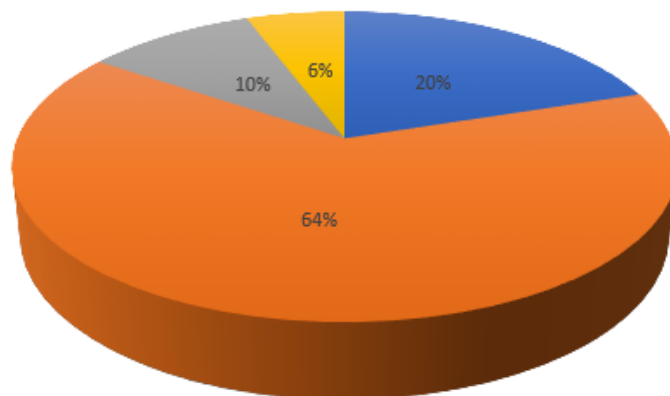

In addition to this, 50% of the profit made from the parabolic game will be burnt to increase the value of the coin for its holders. The remaining 50% of the profits will be held for game liquidity. Having a high amount of game liquidity, will ensure winners are always able to be paid out in time.

# Tokenomics

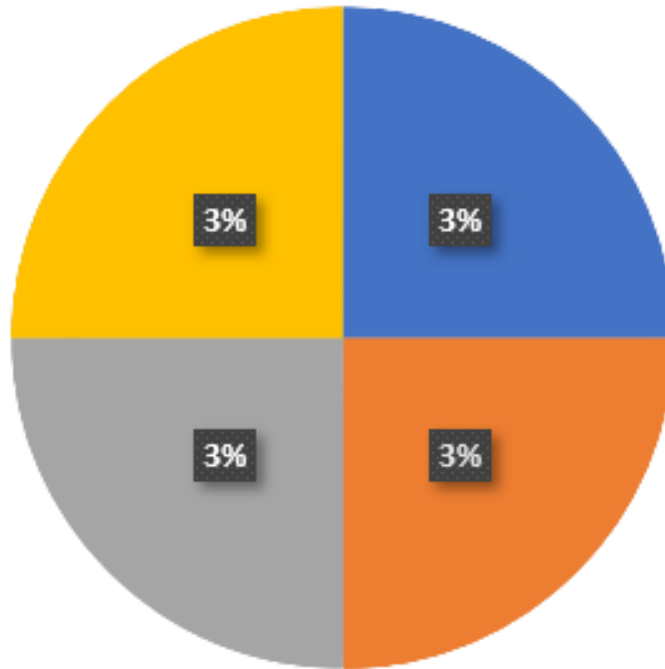

We have made a point to develop our tokenomics so we can have consistent purchase strain and high volume. Our low charges empower clients to swing exchange without being rebuffed with tremendous expenses.

## Token Distribution

INITIAL TOTAL SUPPLY:	1,000,000,000,000
Initial Game Liquidity (Locked):	200,000,000,000
