A word from

FABRICE KERHERVE

Founder & President of Mainston:

“Despite having raised millions, countless ICOs have fallen short of providing a real use case with traction and adoption.”

“The true value is reflected in the adoption and growth of the network of active users that follow, buy, sell, exchange, promote and use your coin every day as a medium of exchange and store of value.”

In July 2019, Mainston International conducted its Private sale ICO for growth capital rather than traditional equity fundraising or venture capital. We raised \$8.4M between July to November 2019.

Mainston connects members of crypto-friendly communities worldwide, allowing them to communicate and transact securely and uniquely using our cryptocurrency.

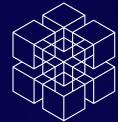

STON is our Ethereum-based decentralized cryptocurrency token that powers Mainston's leading blockchain solutions and global ecosystems. In our endeavor to achieve our vision, we redefine money and how it is used (moved, spent, and invested). In the process, we are democratizing blockchain technology by creating beautiful, simple, and useful financial products and services that have a lasting positive impact on people's lives.

As a result, new financial value is created for marketplace participants that contribute to the growth of the network (e.g., building new technology for the Mainston Platform, bootstrapping new product verticals, and referring to new users and businesses).

In the process, we are simultaneously doing our part to help accelerate crypto adoption.

**MAINSTON INTERNATIONAL
RAISED \$8.4M
BETWEEN JULY TO
NOVEMBER 2019.**

Mainston will be the first platform to allow end customers and sellers to interact with each other through a decentralized blockchain using a crypto utility token (STON), combining the leverage of blockchain and networking worldwide.

By utilizing more advanced and affordable blockchain technology that is integrated with an immediately accessible marketplace, Mainston plans to entirely eliminate the need for intermediaries and their credit processing partners.

Although there are many blockchain companies out there today, most of them fall short of providing what end-users and developers really need to work together and support large scale businesses.

At Mainston, we have developed a fully decentralized and self-governing blockchain ecosystem that offers a platform for building large-scale, transparent networking and consumer applications.

This whitepaper outlines the context, vision, and software architecture behind Mainston - the platform built to serve a broad and diverse group of users worldwide.

As a result of the favorable and crypto-friendly market and clear legal and regulatory framework, our dedicated blockchain company is established and headquartered in Estonia.

The company: **Mainston International OÜ**

The address:

Tallinn Metro Plaza
3rd floor, Viru valjak 2,
Tallinn, 10111
Estonia
Registration number : 14763925

As the company grows, it will gradually expand through subdivisions and representative offices around the world.

The value of the Mainston concept can be divided into different main sub-categories as follows:

- Private ICO: MAINSTON
- A Token: STON
- Token type: ERC-20 Utility Token
- Coin emission: 370,000,000.00 – permanently fixed and limited supply
- Low Cap: 2,000,000.00 Euros / ≈2,400,000 US Dollars
- Hard Cap: 10,000,000.00 Euros / ≈12,000,000 US Dollars
- Pre-Sale Target: existing partners
- Fast growing organic communities
- International networking communities
- Social media marketing
- Voting system - governance system empowering its community to make consensus changes
- A decentralized blockchain-based on (ETH) smart contracts
- A multi-faceted decentralized crypto-wallet - combining software and hardware security modules
- Desintermediation by entirely eliminating the need for intermediaries and their credit processing partners
- Complete project transparency
- High token liquidity and fast integration
- Database quality and size
- Service quality, speed, reliability, user-friendliness and customer support

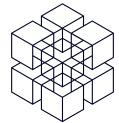

WHY A PRIVATE SALE ICO?

Mainston opted for a private sale ICO to be more flexible in the offering and avoid competing with generic blockchain startups promising to "change the world with blockchain technology" and ridiculous terms and conditions.

We decided to attract legitimate, collaborative partners and investors by raising money privately and targeting more educated and involved audiences for our blockchain project.

As a result, we developed relationships with our partners and the ability to communicate throughout the process.

PRIVATE SALE AND BONUS:

During the pre-sale, a maximum of $\approx 113,220,000.00$ tokens will be available for sale according to the following discount strategy:

- ◆ First, STON tokens will be sold to Mainston partners at a

bonus between the 1st and 31st of August 2019

- ◆ For September 2019, STON tokens will be sold at a

bonus;

- ◆ After that, and until the end of the pre-sale, STON tokens will be sold at a

bonus;

- ◆ No discount will be granted after this period.

Accepted cryptocurrencies: BTC and ETH

Accepted currency: Euros

MAINSTON

DISRUPTING THE DISRUPTORS

ECOSYSTEM

MAINSTON'S CRYPTO SOLUTIONS

Mainston provides secure and easy-to-use custody wallets for its global community to send and receive cryptocurrencies (such as Bitcoin, Ethereum, STON, and any other ERC-20 Tokens) without installing or managing any additional software or complex tools.

PRIVATE KEYS

All private keys of our users are generated and stored within a Hardware Security Module (HSM) certified by FIPS 140-2 (US-governmental and banking standard). Private keys in the HSM are neither visible to Mainston or Tangany and are non-exportable. Our security partners hold licences following financial regulations and are supervised by the German Federal Financial Supervisory Authority (BaFin).

Tangany is also regularly externally audited and follows ISO 27001.

EXTERNAL AUDIT BY SECURITY EXPERTS

Specialized in building secure blockchain infrastructure, U.S. based Certik has diligently audited our Ethereum-based decentralized STON cryptocurrency token smart contract, certifying the highest industry standards.

TRANSACTION SECURITY

Transactions in the Mainston community require an additional confirmation from the user by utilizing a two-factor authentication (2FA) method for improved security. (2FA solutions such as a one-time code via Google Authenticator or Authy).

TRANSPARENT TRANSACTION FEES

Blockchain network fees ONLY — Mainston does not charge additional fees for making transactions via users' chosen cryptocurrency, and users have the option to decide on transaction speed.

API'S

MainSton opens its cryptology and custodian wallets services to businesses of all sizes through secure APIs.

These services facilitate and allow the use and extension of STONs for various unique services such as:

- transactions
- mass-transactions
- micro-transactions
- ramping On/Off
- DEX/DEC exchanges
- BackOffice for small and large e-commerce crypto platforms
- targeted mobile applications, etc.

By facilitating the flow, use, and integration of STONs in retail and online shops, bringing liquidity through adoption, and providing access to multiple large exchanges, Mainston will cement its cryptocurrency as the cornerstone of a new decentralized economy.

COMMUNITY STON HOLDERS HAVE A VOICE

Our goal is to build a governance system that empowers its community to make consensus changes. These systems will make STON adaptable, allowing it to evolve according to the will of the STON holders, and incorporate new technology over the long run.

STON holders who participate in Mainston's decision - making are rewarded for their efforts. Mainston's voting system will allow holders of STON to have a say in the governance of their cryptocurrency and its ecosystem.

A truly distributed consensus - staying true to our vision of creating a blockchain that is completely transparent and decentralized.

Changes within the blockchain will only happen if and when 75% of the community has approved that change. Voting powers will be available to anyone who owns the Mainston coin (STON), no matter how small or big his or her stake is.

It is important to note, that worldwide billions of people in low-income countries cannot access the banking and payment systems.

Facilitated by one of the safest and most secure digital transacting environments in the crypto world, the Mainston coin will be a new-age cryptocurrency supported by a truly decentralized, one hundred percent transparent, and global contracting blockchain that can be adapted and scaled-up to handle a large variety of businesses looking to negotiate contracts for the benefit of all parties involved.

The Mainston platform is a new web-based interface that seamlessly integrates the fiat and crypto tools users need into a design and user-friendly environment.

Our cryptocurrency will seamlessly integrate with the existing payment systems of today and tomorrow, reducing the cost of transactions, and offering a more affordable and transparent fee structure to our users.

Mainston's philosophy is based on decentralizations' immortal and pure motives of having an open, public, neutral, censorship-resistant, borderless form of money - with a permanently fixed and limited supply.

We endeavor to eliminate individual, corporate, governmental and jurisdictional risk.

Blockchain consists of a continuously growing list of records grouped in “blocks” connected using cryptography and distributed networks, forming a digital ledger.

If a blockchain is used in the form of a distributed ledger, a blockchain can be managed by a peer-to-peer network collectively adhering to a protocol for Mainston validating new blocks, which, once recorded, can no longer be altered or revoked.

This consensus-based mechanism built into blockchain removes the need for so-called “trusted intermediaries” and central authorities to run the system, thereby allowing for a trustless system, where two parties who do not know or trust each other can transact with one another.

Once a transaction is recorded on a blockchain, it cannot be retroactively changed without also altering the subsequent blocks and in agreement with the network’s majority consensus. Blockchain is therefore immutable, yet it provides full transparency as every participant can, in fact, audit all the activity that has ever been recorded.

At the same time, participants have partial privacy thanks to the built-in pseudo-anonymity shield blockchain provides.

Mainston’s core principle encompasses the combined effort between all market-participants and market-places that are connected to and operate within its decentralized ecosystem to offer an unquestionably unique competitive advantage that amplifies the core value of the Mainston ecosystem.

NETPRO (IN PROGRESS)

NETPRO immediately allow buyers and sellers across the world to do business with each other without complicated currency conversions or tariffs.

The NETPRO project was born to create a series of incorporated systems within different marketplaces for both individual and corporate customers and merchants to buy and sell everything in crypto (STON, ETH and BTC).

Anyone will be able to use it as a means of payment with a dedicated POS. The World Bank estimates that 10% of global GDP will be generated on blockchains by 2025. The GDP estimate for 2025 is \$100T; thus the value generated through blockchain is expected to be \$10T (10%).

NETPRO will allow merchants to seamlessly access and tap into this \$10 trillion digital asset economy; in effect, by developing NETPRO within Mainston, we will not only allow merchants to participate in a trustful decentralized economy, but also offer everyone access to the growing digital asset economy through our crypto-payment solutions.

NETPRO is an invariable part of the Mainston ecosystem. It will be an integral application to provide user-friendly access to all partners, clients, and users.

0000 0 0 000

Today, we live in an ever-increasing networked world, where technology spreads at an exponential rate.

As a result, blockchain is here to stay. However, it still requires a clear use-case and application with tangible benefits for mass adoption by the public. Key areas will be business-to-business digital wallets for B2B and business-to-consumer.

Mainston's platform (NETPRO) will provide all merchants in Europe (on-line and off-line) a crypto wallet and payment ecosystem.

Providing wholesalers, dealers, business owners, brick and mortar companies, online and e-commerce platforms, web and mobile customers an easy-to-use interface capable of adding and modifying their products and services at any time. One-click solutions to transfer, buy, store, sell and convert crypto (STON, BTC, and ETH) to fiat and vice versa.

KYC/AML & COMPLIANCE

We continue to fight against money laundering and terrorist financing with our remarkably effective AML and compliance policy in accordance with international and national jurisdictional regulations. Mainston works diligently to fully comply with the constantly evolving rules and directives aimed at keeping the crypto finance environment legitimate and clear of bad actors.

For Mainston, KYC/AML is a very important area of focus, not only to block bad actors but also to ensure transparency, security, and legitimacy for all token holders everywhere.

ENHANCED KYC VERIFICATIONS & IDENTITY CHECKS

Our upgraded KYC protocol features a secure identity-checking experience within our community, with a set of fully operational Tiers 1 and 2.

A mandatory Tier 3 (AML) & Tier 4 (corporate) will be fully operational in October 2020, with an enhanced AML questionnaire - to deter the risks of fraud - even from authorized entities, and to monitor ongoing financial transactions to identify suspicious activity and unusual money flows in our financial ecosystem (ex: an unusual and/or a large number of frequent and/or suspicious transactions).

Tier 4 (for Joint and Corporate accounts) is a process that ensures verification of corporate entities or businesses. Business verification includes a comprehensive list of corporate information and documents to deter the risks associated with fraudulent business entities. Both these Tiers have become more than necessary to build a clean customer base as well as business relationships.

We have partnered with two of the biggest players in KYC to provide an optimal Identity Check experience for our community using industry-leading AI solutions that support over 4,600 document types from 195 countries.

To achieve its long-term goal to accelerate the mass adoption of crypto, Mainston is committed to achieving the highest standards of regulatory compliance and legality.

Mainston's global legal team has extensive regulatory experience in fintech, securities law, banking law, AML, and KYC.

All new partners and customers' documents are reviewed to verify compliance with legal regulations.

Fast, effortless, and secure AML & KYC services for individuals, businesses, and institutions:

- proof of identity
- proof of residence
- proof of funds
- OFAC
- Interpol cross-references
- corporate documents and information

✓ Internal regulations done

✓ Risk assessment done

✓ Elimination of fraud and cybercrime risks done

✓ AML 5.0 done

✳ Tier 3 in progress

✳ Tier 4 in progress

ONFIDO

Tier 1: Document & Selfie Verification

Using the power of Onfido, our solutions can accurately scan a user's government identity document and detect whether it's genuine or fraudulent - digitally enabling us to prove thousands of people's real identities by cross-checking and matching valid identity data, photo ID, and facial biometrics.

SHUFTI PRO

Tier 2: Digital address verification solutions

We use ShuftiPro's advanced KYC solutions to ensure high-quality customer risk profiling for online identity fraud mitigation and prevention - establishing accurate proof of address for the Mainston community.

STON TOKEN ECONOMY DESIGN

- ◆ Mainston uses the "STON Token" to store and exchange value on the Mainston platform for services and governance;
- ◆ Running the secured published Mainston API allows any partner or user the ability to interact with Mainston Services on the blockchain through a simple interface;

- The API infrastructure is essential to Mainston's products and services
 - Payment in STON Tokens ensures the platform can remain blockchain agnostic, adopting new blockchain technologies as they appear, while staying compatible with older blockchains versions for as long as is required for the users
 - STON Tokens serve as proof of platform partnership
 - STON Tokens can be used to store or transfer value
 - STON token users, partners, and STON holders would use the tokens to vote on the platform.

TEAM WORK & ORGANISATION

We take care of our team, as people are at the heart of our business.

In today's world, where many familiar and habitual businesses exist, the economy and human practices change rapidly. Fortunately, we have — built-in to our company's blueprint—a mechanism to efficiently handle and respond to any potential threat related to our front-line workers, managers, and any of our community leaders.

Our team members have universally adopted the practice of working remotely.

No matter where our team members work, they are equipped with all the necessary tools and resources to do their jobs effectively.

Team members and managers successfully determine long-term and short-term goals and frequently meet online or in-person - when possible - to discuss progress and results.

This practice allows us to lower overhead costs, with a significant decrease in rent, bills, and business rates, in addition to having a happier, healthier, safer, and more productive workforce.

From the very beginning, we have provided our team members with the flexibility to work from home.

Our communication practices, work-hours, and performance management allow us to make everyone feel included and supported while working in separate locations and monitoring each team member's efficiency.

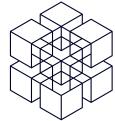

We take great pride in ensuring a real business continuity no matter the circumstance, and we remain confident that our team can work during any potential crisis.

TEAM EXPERTISE:

Blockchain and IT development expertise (OUTSOURCING)

We involve the best professionals from the blockchain and IT sectors who become a part of the Mainston team and help avoid all the pitfalls.

Also, the team is ensuring an intensive development of projects and creating and maintaining synergistic services.

BUSINESS PROCESS OUTSOURCING

Business process outsourcing (BPO) is the practice of contracting a specific work process or processes to an external service provider.

Outsourcing allows businesses to hone in on their main offerings instead of company functions that aren't directly tied to their core processes.

Companies that outsource processes are opting to let specialists handle those tasks, thus saving time, improving accuracy, and increasing their capacity.

For our purposes, we've chosen to work with a company out of Switzerland — the country which has emerged as the world-leader as it concerns blockchain and cryptocurrency development and legal integration.

Our particular partnership with the Swiss blockchain development company will focus its energies exclusively on highlighting Mainston's blockchain business advantages and maximizing our overall growth. In turn, these actions will boost the Mainston competitive advantage and enhance its interactions with the value chain.

Specializing in what are considered core blockchain and cryptocurrency functions, our BPO initiative provides Mainston with world class operating capacity. In fact, this company stands at the very forefront of blockchain and cryptocurrency innovation and will undoubtedly deliver cutting-edge breakthroughs to the Mainston platform. It will also allow for added flexibility while enabling us to respect the deadlines set forth with speed and efficiency.

IMPORTANT NOTICE

This Whitepaper does not constitute an offer to sell or an offer to buy the STON tokens described in this Whitepaper.

The information in this Whitepaper is provided as of the date hereof, and the Mainston Company has no obligation to update this Whitepaper after the date hereof. Please note that the statements in this Whitepaper are not strictly historical statements and include, without limitations, plans, forecasts, and objectives for the development of the Mainston Networking, distribution and utilization of STON tokens, the creation of third-party apps, and trends in personal privacy and security and subjective opinions about market conditions and prospects and these statements constitute forward-looking statements, including, but not limited to, statements related to the development and adoption of the Mainston Networking, the perpetual and secure nature of the platform, and the development of a valuable ecosystem around the Mainston Networking.

In some cases, you can identify forward-looking statements by terminology such as "may", "will", "should," "expect," "potential," or "continue" or the negative of these terms or other comparable terminology.

Forward-looking statements are based upon current expectations that involve risks and uncertainties. The actual results and the timing of events could differ materially from those anticipated in our forward-looking statements as a result of many factors, including, but not limited to, the following: difficulties in the technical development of the Mainston company or third-party apps, the challenges in user adoption, and the development of hacking and other technologies that may compromise the security of blockchain identity solutions.

There are several risks and uncertainties, known and unknown, that could cause actual results to differ materially from these forward-looking statements. The Mainston Company disclaims any obligation to update or correct any forward-looking statements made herein after the date hereof.

DISCLAIMER

(please read it)

This Whitepaper summarizes Mainston's business model and technology, plus a brief introduction to the Mainston fundraising principles, and it should be read in its entirety.

If you are in any doubt about the action you should take, you should consult your legal, financial, tax, or other professional advisor and do not contribute to the development of Mainston.

If you decide to contribute to Mainston's development, please note that your contribution to Mainston, to the best knowledge of Mainston, does not constitute an exchange of cryptocurrencies for any form of securities, investment units, and/or form of ordinary shares in Mainston or any other company.

A Mainston token holder does not receive any form of dividend or other revenue rights, nor does it participate in any kind of profit-sharing program. Regulatory authorities are carefully scrutinizing business and operations associated with cryptocurrencies throughout the world. Therefore regulatory measures, investigations, or actions may impact Mainston's business and even limit or prevent it from developing its operations in the future.

All persons must be informed that Mainston's business model, the Whitepaper, or terms and conditions may change or need to be modified due to regulatory and compliance requirements from any applicable law in any jurisdiction.

All statements contained in this Whitepaper and within the Mainston webpage, statements made in press releases or in any place accessible to the public, and oral statements that may be made by Mainston, its founders, team members, and any third party involved in the Mainston project or acting on behalf of Mainston that are not statements of historical fact, constitute "forward-looking statements."

Neither Mainston, its founders, team members, any third party involved in Mainston project, nor any other person represents warrants and undertakes that the actual future results, performance, or achievements of Mainston will be as discussed in those forward-looking statements.

Forward-looking statements are sometimes, but not always, identified by their use of a date in the future. Forward-looking statements are predictive and involve risk and uncertainty.

Forward-looking statements are not guarantees of future performance and are based on assumptions.

The information contained in the Mainston Whitepaper is of a descriptive nature only, is not binding, and is subject to update.

No information in this Whitepaper should be considered to be business, legal, financial, or tax advice regarding contribution to the development of Mainston.

Mainston will do its utmost to launch its operations and develop the Mainston platform but does not provide any guarantee it will manage to successfully achieve them.

Mainston assumes no liability or responsibility for any loss or damage that would result from or relate to the incapacity to use Mainston tokens, except in case of intentional misconduct or gross negligence.

All product and company names are trademarks™ or registered® trademarks of their respective holders. Use of such company names does not imply any affiliation with or endorsement by them.

Not a sale of a security

This Whitepaper does not constitute a prospectus or financial service offering document and is not an offer to sell or solicitation of an offer to buy any security, investment products, regulated products, or financial instruments in any jurisdiction. STON tokens are not being structured or sold as securities in Mainston International. Owners of STON tokens are not entitled to any rights in Mainston International or any of its affiliates, including any equity, shares, units, royalties to capital, profit, returns, or income in Mainston International or any other company or intellectual property associated with Mainston International.

No representations

No representations or warranties have been made to the recipient of this Whitepaper or its advisers as to the accuracy or completeness of the information, statements, opinions, or matters (express or implied) arising out of, contained in, or derived from this Whitepaper or any omission from this document or of any other written or oral information or opinions provided now or in the future to any interested party or their advisers.

The STON tokens, as envisaged in this Whitepaper, are under development and are being constantly updated, including but not limited to key governance and technical features. If and when the STON tokens are completed, they may differ significantly from the description set out in this Whitepaper. No representation or warranty is given as to the achievement or reasonableness of any plans, future projections, or prospects, and nothing in this document is or should be relied upon as a promise or representation as to the future. To the fullest extent possible, all liability for any loss or damage of whatsoever kind (whether foreseeable or not and whether or not Mainston International has been advised of the possibility of such loss or damage) which may arise from any person acting on any information and opinions contained in this Whitepaper or any information which is made available in connection with any further inquiries, notwithstanding any negligence, default or lack of care, is disclaimed.

Third-party data

This Whitepaper contains data and references obtained from third party sources. Whilst the management believes that these data are accurate and reliable, they have not been subject to an independent audit, verification, or analysis by any professional legal, accounting, engineering, or financial advisors. There is no assurance as to the accuracy, reliability or completeness of the data.

This Whitepaper is a summary of Mainston's business model and technology, plus a brief introduction to the Mainston fundraising principles, and it should be read in its entirety. If you are in any doubt about the action you should take, you should consult your legal, financial, tax, or other professional advisor and do not contribute to the development of Mainston. If you decide to contribute to Mainston's development, please note that your contribution to Mainston, to the best knowledge of Mainston, does not constitute an exchange of cryptocurrencies for any form of securities, investment units, and/or form of ordinary shares in Mainston or any other company.

A Mainston token holder does not receive any form of dividend or other revenue rights, nor does it participate in any kind of profit-sharing program. Regulatory authorities are carefully scrutinizing business and operations associated with cryptocurrencies throughout the world. Therefore regulatory measures, investigations, or actions may impact Mainston's business and even limit or prevent it from developing its operations in the future.

All persons must be informed that Mainston's business model, the Whitepaper, or terms and conditions may change or need to be modified due to regulatory and compliance requirements from any applicable law in any jurisdiction. All statements contained in this Whitepaper and within the Mainston webpage, statements made in press releases or in any place accessible to the public, and oral statements that may be made by Mainston, its founders, team members, and any third party involved in the Mainston project or acting on behalf of Mainston that are not statements of historical fact, constitute "forward-looking statements".

Neither Mainston, its founders, team members, any third party involved in Mainston project, nor any other person represents warrants and/or undertakes that the actual future results, performance, or achievements of Mainston will be as discussed in those forward-looking statements. Forward-looking statements are sometimes, but not always, identified by their use of a date in the future. Forward-looking statements are predictive and involve risk and uncertainty. Forward-looking statements are not guarantees of future performance and are based on assumptions. The information contained in the Mainston Whitepaper is of a descriptive nature only, is not binding, and is subject to update.

No information in this Whitepaper should be considered to be business, legal, financial, or tax advice regarding contribution to the development of Mainston. Mainston will do its utmost to launch its operations and develop the Mainston platform but does not provide any guarantee it will manage to successfully achieve them. Mainston assumes no liability or responsibility for any loss or damage that would result from or relate to the incapacity to use Mainston tokens, except in case of intentional misconduct or gross negligence. This Whitepaper does not compose consultation related to investment, legal, taxation, regulations, financial, accounting, and others, and does not have a purpose of offering evaluation standards. Any part of this Whitepaper cannot be regarded as a suggestion of any kind.

Mainston Company does not guarantee the accuracy or properness of any content, including Mainston project schedule of future roadmap and time you read this Whitepaper, as well as achievement and conclusion. Mainston Company will not state or guarantee the accuracy of any matter to the ones reading this Whitepaper and will not take any legal responsibilities.

Mainston Company will not guarantee:

if the Whitepaper is written based on legitimate right and does not violate the right of the third party if the Whitepaper is commercially valuable or useful,

if the Whitepaper is suitable for you to achieve a specific purpose, if there is any error in the contents of the Whitepaper, and

if it is legitimately written, distributed under Mainston Company or your countries' legislations, or if the contents have violated legislations of your countries.

Also, this document contains forward-looking statements and information, which reflect Mainston International's current view with respect to future events and financial performance. When used in this document, the words "believes", "expects", "plans", "may", "will", "would", "could", "should", "anticipates", "estimates", "project", "intend" or "outlook" or other variations of these words or other similar expressions are intended to identify forward-looking statements and information.

Actual results may differ materially from the expectations expressed or implied in the forward-looking statements as a result of known and unknown risks and uncertainties.

Known risks and uncertainties include but are not limited to; risks associated with political events in Europe and elsewhere, contractual risks, performance of suppliers and management; risk associated with financial factors such as volatility in exchange rates, increases in interest rates, restrictions on access to capital, and swings in global financial markets; risks associated with domestic and foreign government regulation, including export controls and economic sanctions; and other risks, including litigation.
