# INCORPORATION AND INTRODUCTION

Gorilla Diamond Incorporated is a Canadian corporation based out of Ottawa, Ontario, Canada. On April 6th, 2021, the Director General of Corporations Canada, Raymond “Ray” Edwards, signed our Certificate of Incorporation, brought our company to life, and gave us our very own corporation number: 1290262-1. We are extremely proud to have full and official licensing in Canada on both federal and provincial levels. A copy of our Article of Incorporation and official .GOV Certificate can be found on our website under the “Corporation” tab.

Despite our company’s youth, we have veteran leadership at the top level. Owner, founder, and CEO Ahmad Hassan is an expert businessman with years of experience in the business world. Hassan is currently involved in several markets, including restaurant (The Pitt), graphics and design (miniLARGE Inc.), and news (Space Today). Even though Hassan’s businesses have brought him great success, he remains hungry for more. After becoming intrigued by the ongoings of the cryptosphere and noticing that something was missing, Hassan decided to launch his own crypto company. On April 10th, 2021, after months of brainstorming, deliberation, and hard work, the Gorilla Diamond Token was finally launched.

# TOKENOMICS

\$GDT – Gorilla Diamond Token – is a Binance Smart Chain (BEP-20) token that originally launched with 1,000,000,000,000,000 tokens in circulation.

100,000,000,000,000 tokens were sent to DxSale for our presale and 47,500,000,000,000 tokens were sent to PancakeSwap for our initial liquidity pool.

95% of the liquidity generated from our 500 BNB presale – which sold out in under 10 minutes – was sent to the PancakeSwap liquidity pool.

There is an 11% fee taken from every transaction:

- o 6% is reflected to our holders
- o 2.5% is sent to our burn wallet and taken out of circulation
- o 2.5% is automatically added to the liquidity pool

Apart from PancakeSwap, there are three locked liquidity pools in DxLocker:

- o 100,000,000,000,000 \$GDT locked for one year
- o 150,000,000,000,000 \$GDT locked for two years
- o 200,000,000,000,000 \$GDT locked for three years

We have three funds that are used to pay for things such as exchange listing fees, development of our platforms, advertising/marketing, and community events and giveaways. Most of the time, these funds are liquidated on exchanges, which ensures the PancakeSwap price is not affected. If these funds are liquidated on PancakeSwap, they are slowly dripped out so that the price is not drastically affected. Additionally, there is a token balance sheet on our website and Discord that allows our shareholders to track the funds that come in or out of these wallets. Here is a breakdown of these funds:

- o Exchange Listing Fund: 150,000,000,000,000
- o Development Fund: 50,000,000,000,000
- o Community Fund: 10,000,000,000,000

# OUR PLATFORMS

Gorilla Diamond Incorporated is in the process of developing several revenue-generating platforms. Currently, these platforms include the Diamond Service Market, Swiftly Swap, Rising Tokens, and the Diamond Wallet. Each platform will have its own unique features and purposes, but they will all be interconnected under the umbrella of Gorilla Diamond Incorporated.

The Diamond Service Market is a peer-to-peer service-based crypto marketplace. Users of the Diamond Service Market will exchange cryptocurrency for various services. We aim to capitalize on massive amounts of market share from established service-based industries by allowing cryptocurrency as a form of payment and by securing the transaction for both parties through the use of smart contracts. In addition to this, our service-based marketplace will be unique; there is no marketplace that targets the area of service we are going to target. Due to this fact, we have released a limited amount of information on the Diamond Service Market in order to protect our idea, our company, and our shareholders. Once development has started, we are going to begin releasing more information. Development of the Diamond Service Market will begin in Q3 and be completed in Q4.

Since the Diamond Service Market will not be released until Q4, we are developing proof-of-concept platforms in the meantime. Swiftly Swap and Rising Tokens are two separate projects that are going to be crucial to both Gorilla Diamond Incorporated and our Gorilla Diamond Token. Transaction reflections (see pg. 5 for more information) will be implemented on both platforms. Releasing these platforms before the Diamond Service Market will provide further substance for potential investors. Development of these projects will begin in Q2 and be completed in Q3.

Swiftly Swap will function as a swapping service that allows users to seamlessly exchange several crypto currencies. The website will have features that connect the Diamond Wallet and the Swiftly Swap platform wallet. There will be a transaction fee for each transaction processed on the website.

Rising Tokens will function as a token listing website that highlights and features the latest trending tokens. Tokens can rise through the ranks on the website based on the number of votes they have received. There will be numerous features packed into the Rising Tokens website that other similar sites lack, such as live charts, live market cap data, live price data, a video section, and links for social medias, white papers, and audits. Paid listings for tokens will be offered, which will allow them to be listed instantly with no delay; this will be the main source of revenue for Rising Tokens. Paid listings must be verified through email, be listed on CoinMarketCap or CoinGecko, and be listed on at least one exchange.

The Diamond Wallet will be Gorilla Diamond Incorporated's signature mobile wallet; it will be available on both iOS and Android. Users will be able to purchase GDT directly on the Diamond Wallet with a debit card, thus diminishing the barrier of entry to acquiring GDT. Tokenomics will be supported on the wallet, meaning each transaction will have reflection and burn functions. There will also be several features that are exclusive to the wallet, such as price projections, reflection tracking, live graphs, and more.

# TRANSACTION REFLECTIONS

Our Gorilla Diamond Token will not be another “meme” token on the market – it will hold value, purpose, and be supported by solid technological foundations.

The platforms that Gorilla Diamond Incorporated develop are designed to generate revenue through transaction fees or paid promotions. The Diamond Service Market, Swiftly Swap, and the Diamond Wallet will all offer services that have a transaction fee attached to it. Rising Tokens will offer paid promotions for tokens that want to be listed instantly and access exclusive features on the website.

Currently, the main use case of GDT is transaction reflections. All of our platforms combined have the potential to generate millions of dollars per year through transaction fees, and 10% of all transaction fees will be reflected to our holders.

For example, if the Diamond Service Market generates \$1,000,000 in transaction fees, \$100,000 will be reflected to holders. If Swiftly Swap and Rising Tokens generate \$2,000,000 combined, \$200,000 will be reflected to holders. As our platforms increase in popularity, the amount of transaction fees will increase, leading to more transaction reflections. This model encourages our community to spread the word about all of our platforms!

# OUR FUTURE

The future is bright. Our platforms have the potential to make Gorilla Diamond Inc. a billion-dollar company, and that is not an exaggeration. Even when our platforms begin to see incredible success, we will never get complacent.

Once our platforms are developed, we will have the funds to explore various business avenues. Even before our platforms are fully developed, we are going to begin brainstorming and developing more use cases for GDT. Our platforms will allow us to branch into specific niches tailored to a targeted demographic and audience. We will be able to utilize our technology in different latitudes and create multiple revenue streams for our holders. Creating the unique technology required to build our platform will provide the competitive edge and ability to reproduce the success from one market to another.

Our platforms will also host advertisements and placements paid by future business partnerships interested in targeting our audience. This will create an entirely new stream of revenue for our holders in addition the profit sharing from our platform. This procedure will be replicated across all platforms owned by Gorilla Diamond Inc.

In addition to this, since Gorilla Diamond Inc. is a legitimate business, the possibilities are endless. Gorilla Diamond Inc. could expand into various markets, such as eSports. If we believe it is a smart move, there is a chance we may even look into a public IPO on the Nasdaq and NYSE.
