## ABOUT ALCAZAR

Alcazar is an ERC-20 chain project aiming to merge luck in the real world and the crypto world. This token will offer its holders to participate in virtual raffles to win high-end luxury assets in the real world. The next generation dApp will allow the backers of this project the chance of winning luxury watches, exotic vehicles, tickets to premium events and high amounts of tokens in many other projects that the holders dream of being a whale on. The core team consists of experienced investors, developers and marketers all based on a physical and legal company in the UK. We will be very happy and pleased to welcome our backers in our office in the near future as our project grows together with you.

If you ever dreamt of feeling the breeze in your roadster on the coast of Monaco, join a luxurious cocktail party with our entrepreneurs, or attend the Monaco Grand Prix with an exclusive hospitality ticket, Alcazar is here for you.

## SMART CONTRACT

Our smart contract has been deployed in the ERC-20 chain with simple, but yet useful functions. With a low tax of 3%, the smart contract itself will bring attention to Alcazar.

3% tax is separated in 2% auto liquidity and 1% marketing/utility wallet which holds up to 0.025% of the supply before converting it to ETH and sending it to the deployer wallet.

The auto liquidity tax will build Alcazar a really strong liquidity floor as time goes on, thus making Alcazar bullet-proof in the long run. Volatility within the chart will be limited as time goes on, making the token desirable for whales.

The Ethereum collected in the deployer wallet will be used for marketing and utility purposes, some of it will also be used for buybacks to support the chart as we have always promised. Alcazar team has got your back.

## WHAT MAKES US SPECIAL?

### **Community:**

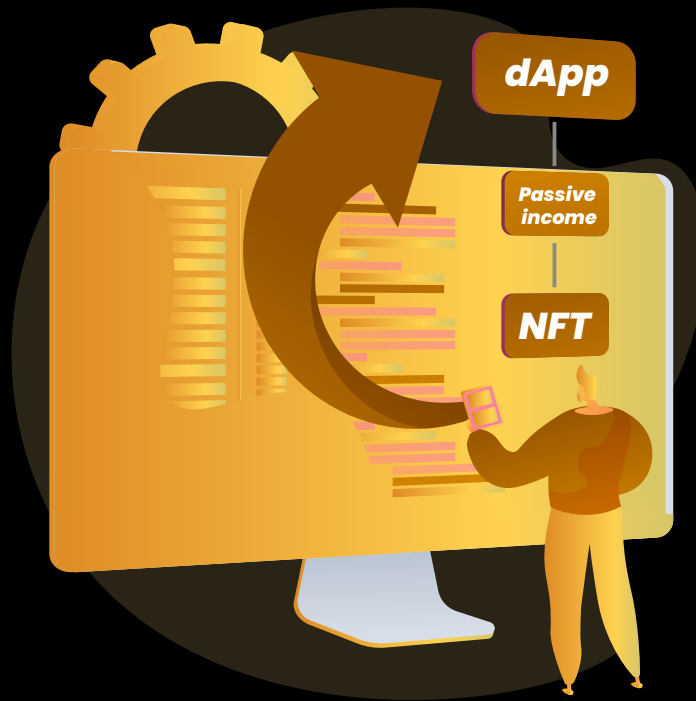

With over 300 holders within less than 24 hours of our launch, the community is a part of ours to be proud of. We welcome everyone in the Alcazar community and it's as easy as joining our Telegram channels and start participating in community activities such as raiding, shilling, etc.

### **The Team:**

Our team consists of highly professional and experienced members. Our experience in the crypto space has given us the chance to launch Alcazar in the best and most optimal way possible, no matter the market conditions of the crypto space. The transparency within the team is unmatched with every transaction we make being public with public wallets. Short to say, our team is part of the community, not above it.

## UTILITIES

The \$ALCAZAR token will have many use cases that will benefit its holders. We are building a dApp that will burn \$ALCAZAR on every single transaction made through the dApp, thus making us even more deflationary than we currently are.

The holders will be able to stake their \$ALCAZAR tokens and earn passive income on them, thus never having to sell their tokens. This will be a big incentive for everyone to hold their tokens, turning the sell pressure insanely low thus the price going up.

Alcazar will also launch NFTs in the near future. The NFTs will have their own separate utility within the dApp, but this will not be the only use case. The NFTs will also be able to get staked for you to earn \$ALCAZAR tokens off them.

## THE DAPP

Our dApp will be a state of art, built with passion and care by our experienced developers and designers.

The dApp will make it possible for the team to raffle away anything they seem fit. Those consisting of, but not limited to high quality luxury watches, exotic vehicles, straight cash, high amounts of certain tokens and many other items desired by the community.

The community will also have a say on what's going to be raffled. They will be the ones to decide whether the raffle will be a Golden Rolex watch, or a Rose Gold Rolex watch. Basically, we are building the perfect dApp for you to fulfill your dreams with.

### ***How does it work?***

Our team has been building up reserves in cash and items ever since the project idea was born. In the backend of the dApp, our team will add those items up for raffles, along with many new items we will be purchasing for the community.

The users will connect to the dApp with their web3 wallet, enabling them to purchase an entry ticket on any item they like. Ticket purchases have no limit and you may purchase as many as you want with one wallet.

3% of the purchases will go to a separate wallet which will be transparent to the community, and will regularly be used to buyback and burn \$ALCAZAR tokens – making our token more scarce with every single purchase.

The rest of the money collected by the purchases will go to adding more items up for raffles, thus increasing the quality of items for raffles day by day with every purchase you make.

### ***An example scenario:***

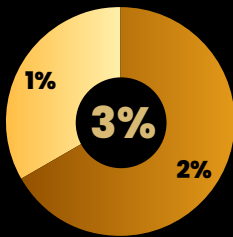

Alcazar team puts a Golden Rolex up for a raffle, with 500 tickets to fill the pot and every ticket costing \$20 in stablecoins, \$ALCAZAR or \$SHIDO tokens. On every purchase of the ticket, 3% of the \$20 cost will be sent to a separate wallet and once a certain amount is collected in that wallet, it'll be used to buyback and burn \$ALCAZAR tokens. After 499 tickets are bought, John Doe purchases the 500th and last ticket thus ending the raffle, an animation will automatically appear on the screen when the raffle is clicked and will announce the winner. The winner then is announced in our socials and in the dApp/website, making it possible for them to connect to the dApp with their web3 wallet and claim the prize.

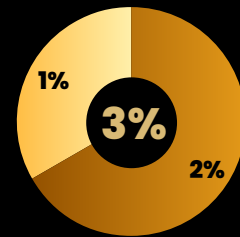

## TOKENOMICS

### **Transaction Tax:**

**Buy**

2% LP  
1% Marketing/Utility

**Sell**

2% LP  
1% Marketing/Utility

### **Token Allocation:**

- ◆ 1,000,000,000 \$ALCAZAR tokens minted at launch
- ◆ 400,000,000 \$ALCAZAR tokens burnt at launch
- ◆ 200,000,000 \$ALCAZAR tokens vested (locked) for CEX-es and dApp
- ◆ Liquidity is locked for 100 years
- ◆ 2% MAX Wallet and 2% MAX TX

## FAQS

### ***How will the winners be chosen?***

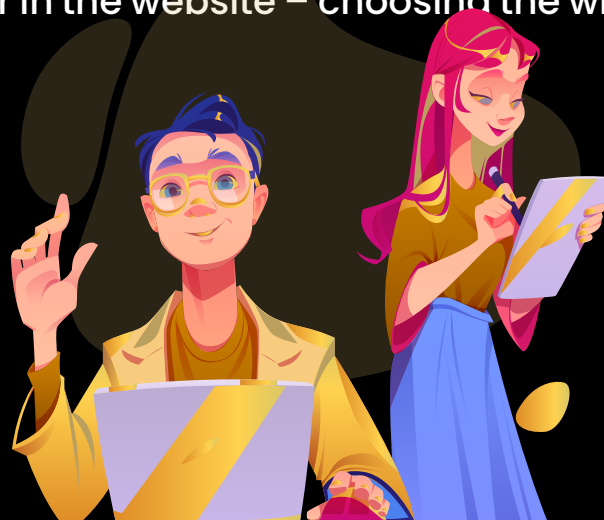

Our dApp will be an open book, we will have it audited by a trustable company which will guarantee that there's no foul play in it. The winners will be fully random and chosen by the ticket number. So, the more tickets you have for the said raffle – the chances of you winning are higher. The winners will be announced in our website and all of our socials, there won't be any e-mails associated to notify the winner.

### ***How will the winner claim their prize?***

The winner will be able to claim their prize with a click of a button by connecting their web3 wallet to our dApp. The winner will be able to choose either the item that's being raffled, or if shipping/country regulations are an issue they will be able to claim their prize in stablecoins directly to their web3 wallet. We make it easy for our users to claim their rewards.

### ***When will the winners be chosen?***

After an item is out for a raffle, the winner will be chosen the moment the last ticket is bought. Depending on the item, there will be XXX amount of tickets so the moment the last item is bought, an animation will automatically appear in the website – choosing the winner with a random picker algorithm.

## FINAL NOTE

We would like to thank you for taking your time to read the first version of our whitepaper. We are free to be contacted from Telegram or our other official channels for any questions for the community.

***Join Alcazar. Feel Unique. Feel Royal.***
